#### Client Communication

**12-11-2023 12:36:00pm**

Dr. Kristin Foley

Please call if you have any questions or concerns

Please keep incision area clean and dry for the next 10 days, Call if any Bleeding persists

Please keep quiet and confined for 7-10 days

Please store medication away from heat and direct sunlight, complete all medication unless otherwise directed

Please have Cosmic wear an E-Collar if he licks at his incision or whenever he is unattended.

Cosmic may be tired and a little whiny tonight from anesthesia, This will wear off over the next 12 hours, He may also have a decreased appetite for the next day or so, but offer him a small amount of food tonight.

Please let us know if Cosmic is not eating by Wednesday.

You can start Cosmic's medication tonight if he is eating. If he does not eat, start it in the morning.

Cosmic may have some scrotal swelling because of his procedure today. This is normal for some dogs, but if you notice it you can try applying a cold pack to the area 2-3 times a day for 5-10 minutes at a time. (A bag of frozen peas or bag of crushed ice wrapped in a towel makes an excellent cold pack.)

#### Discharge Summaries

### **Post-Operative Castration Instructions**

Cosmic has been castrated today, which involved surgery in a very sensitive area and therefore he needs care for sometime after the event. Unfortunately, dogs do not always understand that they must rest so we need you to assist in Cosmic's recovery.

When you pick Cosmic up from our hospital, he may be a little drowsy. This is quite normal following an anesthetic and surgery. The drowsiness should subside over the next 12 - 24 hours. Please keep him inside and warm tonight. There may be some bruising, just as in humans, so Cosmic should not be expected to be completely normal for a few days.

Please keep him quiet and rested during this time including no running, jumping, or vigorous activity. Cosmic's sutures will need to be kept dry, that means no swimming or bathing. It is very important that Cosmic does not lick his stitches as this can introduce infection and also open the wound. Please monitor the incision for any signs of redness, swelling or discharge; and if any of these are identified please contact us immediately.

Please offer Cosmic only small amounts of food and water tonight. From tomorrow morning, he can receive food and water as normal.

Generally, there are very few complications following this operation, however, there are some signs to watch out for that may indicate a

problem. If you notice any of these signs please contact us immediately:

- Dull and listless especially (especially after the first 24 hours)
- Excessive redness or irritation around the suture line
- Swelling or lumpiness around the suture
- Discharge from the wound or reproductive organs
- Vomiting, diarrhea, inappetence or blood in the stool
- Chewing at sutures
- Broken sutures or odour from the wound
- Urinary incontinence (leaking of urine)
- No stools for more than 2 days after coming home

Please give the prescribed medication as directed and feed Cosmic normally throughout this time.

If you have any questions or concerns regarding Cosmic's progress, please do not hesitate to contact us.

Regards,

The Team at
